EXPERIENCE

Turkish-German University | *Undergraduate Researcher* *Istanbul, Turkey* | **August 2023 - 2025**

- Conducted bioinformatics-driven genomic analysis, integrating large-scale datasets from TCGA and GEO
- Developed models (SVM, RandomForest, LR) for cancer classification and biomarker identification
- Applied statistical techniques for gene expression and survival analysis, analyzing PPI networks
- Explored genomic predictors of drug response across multiple cancer cohorts
- Applied deep learning approaches (GCN, LSTM, GRU) to model intrinsically disordered protein dynamics
- Strengthened expertise in computational biology, data visualization, and interdisciplinary research

Gebze Technical University | *Bioinformatics Intern* *Gebze, Kocaeli* | **July 2024**

- Conducted transcriptome and proteome analyses on Alzheimer's Disease datasets
- Performed differential expression analysis and gene correlation studies
- Focused on omics data integration and co-expression network analysis

Vision Biotechnology | *Laboratory Intern, R&D* *Istanbul, Turkey* | **January 2025**

- Engaged in R&D for diagnostic test kits, focusing on lateral flow assays and PCR-based diagnostics
- Learned membrane immobilization and conjugation buffer preparation for biomarker detection
- Conducted quality control and assay validation for lateral flow and qPCR tests
- Gained expertise in molecular biology techniques, including nucleic acid amplification and fluorescence detection

EDUCATION

Turkish-German University | *Bachelor of Science in Molecular Biotechnology* *Beykoz, Istanbul* | **2021 - 2025**

- Coursework includes bioinformatics, molecular biology, and biotechnology techniques, both in silico and in the wet lab
- Lab techniques include PCR, SDS-PAGE, cloning, chromatography, etc., providing a solid foundation in experimental biotechnology
- Active participation in bioinformatics and omics research projects, combining computational and laboratory skills

Gebze Technical University | *Master of Science in Artificial Intelligence* *Gebze, Kocaeli* | **2025 - Present**

- Advanced coursework in core AI disciplines, including machine learning, deep learning and applications, and pattern recognition
- Focus on data-driven methodologies through courses like statistical data analysis and big data analytics
- Emphasis on applying theoretical models to solve complex problems, with a personal research focus on leveraging AI for bioinformatics and computational biology challenges.

PROJECT EXPERIENCE

PDAC Biomarker Discovery and Machine Learning Classification *Turkish-German University* | **2023**

- Developed and tested machine learning models to classify PDAC samples
- Performed feature selection and analysis of hub genes for early diagnosis biomarkers
- Performed survival analyses to evaluate the clinical significance of the biomarkers using the developed machine learning models.

Unraveling Genetic Interactions in Alzheimer's Disease *Gebze Technical University* | **2024**

- Conducted large-scale RNA-seq data analysis on AD patient samples
- Focused on the correlation of APOE genotypes with gene expression
- Built gene co-expression networks and identified key pathways involved in disease progression

Genomic Predictors of Drug Response Across Cancer Cohorts *Turkish-German University* | **2025**

- Investigated how genomic alterations such as copy number variation, mutations, and gene expression influence patient response to specific anticancer drugs across multiple TCGA cancer cohorts
- Focused on Paclitaxel in BRCA, Gemcitabine in PAAD, and 5-FU in STAD cohorts, using sample-level sensitivity/resistance information
- Performed survival modeling using Cox regression, extracting hazard ratios and C-indices to quantify effects.

Predicting the Temporal Dynamics of IDPs Using DL *Turkish-German University* | **2025**

- Conducted as a Bachelor's thesis, focusing on the conformational dynamics of IDPs
- Investigating disordered protein dynamics using deep learning and MD simulations
- Developed GCN & GRU models to predict protein conformational changes
- Compared force field accuracy in structural behavior analysis

Predicting Cryptic Druggable Pockets in IDPs Using DL *Turkish-German University* | **2026**

- Developed a novel deep learning pipeline combining GNNs and LSTM networks to predict the formation of transient, "cryptic" druggable pockets from MD simulations.
- Designed integrative feature sets combining dynamic, geometric, and chemical descriptors for protein atoms
- Aimed to identify therapeutic targets in "undruggable" proteins such as amyloid-beta, relevant to neurodegenerative disorders

Multi-omics Integration, AI, and Organoid Technologies for Investigating Cancer Drug Efficacy and Resistance
Dokuz Eylül University | Incoming Researcher (BAP Scholarship)

- Funded by Dokuz Eylül University Scientific Research Projects (BAP), Project No. 4109
- Principal Investigator: Prof. Dr. Şerife Esra Erdal Bağrıyanık

SKILLS

• **Bioinformatics Tools:**	*DESeq2, ClinVar, Cytoscape, BLAST*	**Technical Skills:** Expert
• **Computational Environments & Tools:**	*High-Performance Computing, Linux/Unix Command Line, Bash*	**Technical Skills:** Expert
• **Programming Languages:**	*R, Python, Bash*	**Technical Skills:** Expert
• **Wet Lab:**	*PCR, SDS-PAGE, Cloning, Chromatography*	**Technical Skills:** Strong
• **Communication:**	*English, German, Turkish*	**Language:** Fluent

CERTIFICATES

- Bioconductor for Genomic Data Science
- Command Line Tools for Genomic Data Science
- Reproducible Research
- Exploratory Data Analysis
- Algorithms for DNA Sequencing
- Getting and Cleaning Data
- Python for Genomic Data Science
- Introduction to Genomic Technologies
- R Programming
